Your watch

DATE MOON PHASES, MOON PHASES, DATE, SECONDS, SELF-WINDING

CALIBRE 913QL, UP TO 40-HOUR AUTONOMY.

6106

6106-2987 / 6106-4628

The **6106-2987** and **6106-4628** watch models are adjusted in the same way.

THE CROWN HAS TWO DISTINCT POSITIONS:

Position A, crown in manual-winding position.

Position B, crown pulled out to time-setting position, enabling adjustment of the hours and minutes. In this position the seconds hand can be locked by turning the crown very slightly backwards, enabling the watch to be synchronised with an hour signal.

Push the crown back in to position A once the time has been set.

FAST CALENDAR ADJUSTMENTS:

The stylus supplied with the watch is designed to actuate correctors 1 and 2 located on the circumference of the case.

1. To adjust the date: corrector 1, located at 10 o'clock
2. To adjust the moon phases: place the disc in the full-moon position using corrector 2 located at 8 o'clock. Check the date of the last full moon using a lunar calendar. Press corrector 2 the same number of times as the days that have elapsed since the last full moon.
